Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 April 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1,6,7 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: applicant has not structurally defined the pumping light reflecting portion but only describes it as having an inner space.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,6,7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fyler (PN 3,611,179) in view of Lindeburg (Engineer in training).

Regarding claims 1,4-8,10-12

Figure 3 illustrates an optical fiber bundle with the fiber having a core (46) and a cladding (48). A cooling fluid is provided within the fiber optic bundle. Figure 5 illustrates

Art Unit: 2828

an arrangement where the cooling fluid and the fiber optic bundle are contained within a tube (56), where the cooling fluid is circulated. Tube (56) is provided with extended optical fiber bundle, where a source (68) provides an input light on end (58) and end (60) provides output light. In column 4 lines 1-5, discloses the cladding layer (48) as having a refractive index of 1.52.

Fyler is silent regarding the refractive index of the cooling fluid or the coolant used.

However, it is notoriously well-known to use Benzene as a coolant.

Lindeburg discloses in table 5 the approximate refractive index of Benzene as being 1.50, which is substantially the same as the cladding layer (48).

Therefore, it would have been obvious to person having ordinary skill in the art at the time the invention was made to use Benzene as the a cooling fluid for the device of Fyler because it would provide a refractive index similar to the refractive index of the cladding layer (48).

Regarding claims 2,3 and 9,

Fyler does disclose a circulating cooling system.

Fyler does disclose a cooling fluid for cooling the optical fiber bundle.

Therefore, it would have been to use the cooling system of Fyler because it would cool the optical fiber bundle.
